

Journey at a Glance

6-session progression across 3 phases — from problem definition to working proof of concept

PHASE 1 Define the Problem	
S1	Setup + Profile Meet Claude Code. Profile yourself. Build your CLAUDE.md collaboration contract. participant_profile.md CLAUDE.md
S2	Ideation Frame your problem. Design your agentic use case. Map where AI acts and where the human stays in control. problem_definition.md
PHASE 2 Validate Before Building	
S3	Quality + User Research Test your core assumption. Identify what could go wrong. Plan how to validate with real users. testing_prompt evaluation_design_report user_research_plan
S4	What Good Looks Like Define output rubrics, anchor examples, UX context map, and ownership rules for every part of the system. evaluations_data.csv user_experience_spec.md
PHASE 3 Build With Intention	
S5	Requirements + Specs — Build Gate Turn validated understanding into buildable specs. Build your rough POC with Claude Code after this session. implementation_design.md mvp_specs.md
S6	Making It Rigorous Review the POC. Understand why it works. Start making it consistent and reliable. architecture_notes system_spec
AI Mentor Circle — Reference Diagrams
